

Tricky topics

trailer transcript

INSTRUCTOR: As a teacher, trainer, and educator, we know that we've failed when we have a learner that says that was great. I didn't have to think about it, and I could forget about it afterwards. Learning should be transformative. It should change the way we think about ourselves and the world around us. But in supporting someone in their learning journey, we need to help them to overcome those learning barriers in understanding so that they can emerge transformed.

Tricky topics is a practise-based process underpinned by several teaching and learning theories, such as threshold concepts. This free course will help you to unlock your full potential as a teacher, educator, trainer by helping you to identify students' barriers in their understanding, capture and share these tricky topics, design learning to overcome those barriers in understanding, and finally, to accurately assess if they've really developed a deep understanding, or are they simply memorising and regurgitating information. Teachers who've gone through this process have emerged totally transformed, and they've told us that it was priceless. Absolutely priceless.
