An introduction to exoplanets

[MUSIC PLAYING]

[TEXT ON SCREEN]: Right now in our Galaxy there is a small rocky world inhabited by seven billion people.

They are at a critical stage in their history and are just beginning to realise that their Galaxy contains far more than one planet for each of them.

Carole Haswell: How many planets like Earth does our galaxy contain? Is our own solar system unique? Is it typical, or is it in between? How can we measure the properties of planets we can't even see? Study this free course from The Open University to find out.
