Understanding science: what we cannot know

Course trailer

MARCUS DU SAUTOY: I'm Marcus du Sautoy, and I'm the Simonyi Professor for the Public Understanding of Science, and Professor of Mathematics at the University of Oxford. I've joined up with the wonderful team at the Open University to bring you a course based on my book 'What We Cannot Know', where you can discover what we do know, how we know it, how scientific knowledge evolves and changes, and whether there are questions of science that we'll never be able to answer. From the very small to the very large, from the deep past to the distant future, from the complexities of the human brain to the infinities of mathematics – let us take you on an exploration to the edges of scientific knowledge.
