

Philosophy and the Human Situation

Philosophy and the human situation

Philosophy and philosophical enquiries are relevant in some shape or form to many aspects of everyday life, for example our treatment of the environment, the rapidity of today's technological progress, whether animals should have rights and if so how they should compare to ours. Philosophy also encompasses questions about the existence of God, how life is sustained on earth, and even at what point should the Government intrude on a person's freedom. This album introduces the study of philosophy and the human situation, and contains talks and debates from leading philosophical thinkers and teachers, past and present. This material forms part of the Open University course A211 Philosophy and the Human Situation.
