

Digital Nepal

Nepal's future: Technological developments

So, what kind of projects are being considered for the future of Nepal's technological development?

MAHABIR PUN

This is a camera; we're far away near the Himalayas. So we have put this camera there especially to help the airlines. And the airlines can see how cloudy it is to fly in that region and they also can see the, you know, real time weather. We are also trying to put sensors in the mountains to monitor the climate change. So those kind of changes can also be connected to the network and the data from the sensors can be accessible directly

DR SAROJ

Actually, we're dreaming of an explosion of education and health in this country by the use of ICT. Our plan of virtual classrooms scattered in the remotest northern areas at high altitudes where people can listen to a very good teacher from Kathmandu or Phokara or any other city while they are in er, er, the, the, very, very local stone and mud houses.

MANESH SHRESTHA

The demand for change among the people is happening, and this demand is happening because they are aware. And as soon as they are aware, people want change. And when there is demand for change it just, it's just a natural process.
