

Starting with Maths

How many times have you used mathematics today? Starting with Maths takes a detailed look into the history behind numbers and how mathematics has evolved into something we use in everyday life. We hear the experiences of people who rely heavily on accurate calculations for the success of their jobs. In addition to this we look into the lives of 12 OU students as they explain how studying makes them feel 'on top of the world'. This material forms part of the course: Y162 Starting with maths.
